BULLETIN NO. 139

TO: All Distributors

SUBJECT: Model "H" Amplifier Removal

If the amplifier is removed from the Model "H" phonograph cabinet, it will be noted that the length of the attached wires is sufficient for complete removal without their being disconnected.

When the amplifier is put back into the cabinet compartment, it is essential that the wires are carefully dressed away from the tubes and transformers so that the heat generated in these parts does not deteriorate the insulation.
