At last Music operators have found a way to eliminate the rapid depreciation of their equipment. When used in connection with this system, phonographs formerly considered obsolete have the same value and earning power as the latest models.

## BUCKLEY MUSIC SYSTEM

*greater  
profits*

**TRIPLE YOUR INCOME WITH  
THE BUCKLEY MUSIC SYSTEM**

Every experienced operator knows that his income increases in proportion to the number of coin slots that are made conveniently available in each location.

Each Buckley Music Box is equivalent to a miniature phonograph with exactly the same appeal and earning power. The public appreciates the convenience and responds with great enthusiasm.

Buckley Music Boxes can be installed in booths, on walls, counters, bars, tables or stands. Some operators even place them outside of the premises where the phonograph is located.

In many instances from \$0.10 to \$1.20 has been collected for playing just one popular number. Ask your jobber or distributor about this feature.

The Buckley Music Box is a finished product, developed and tested on locations for three years by America's oldest music operators. No mechanical defects. Therefore, no service calls.

Any or all records up to twenty-four can be selected from any box, regardless of distance from phonograph.

Once installed on locations, there is no more equipment to buy. The Buckley Music System can be operated in connection with any make or model of selective phonograph. Two twelve record mechanisms can be combined into a twenty-four record installation.

Your locations are going to demand this modern system very soon. So why not be first in your territory and begin to cash in on the profits.

The average music installation costs no more than a new phonograph.

Ask your jobber or distributor for a demonstration.
